

SAP, Cloud and Governed AI. Engineered to Spec.

SVLS LABS designs, builds and verifies S/4HANA and BTP landscapes, connects them to your cloud, and adds agentic AI with deterministic numbers and a human decision on every action. Founded 2020. 25+ years of SAP delivery experience across our key architects.

25+

years of SAP delivery experience across our key architects

founded. SVLS LABS LLP

2

products: Value Lens (private beta) and SAP Intelligence Suite

3

practices: SAP & ERP, Cloud, Agentic & Applied AI

Three Practices. One Standard.

01 • SAP & ERP

Clean Core from day one

S/4HANA Public and Private Cloud, RISE, on-premise. BTP and Integration Suite flows from a pattern library with a written contract per interface and a read-back check after every run. PS/EPPM, Tools & Equipment Management, O2C, P2P, finance.

02 • CLOUD

Cloud around the SAP core

SAP-to-GCP/BigQuery and Salesforce integration, cloud-native services around the core, migrations and landing zones that keep the ledger intact. Every extract reconciled to SAP totals.

03 • AGENTIC & APPLIED AI

Governed agents on SAP BTP

MCP tool catalogs, Joule/A2A, SAP AI Core, LangGraph and RAG, under a control model where every write is read before, confirmed by a person and verified after. Applied research: Markov and stochastic models, constraint-based generation, metaheuristic optimisation, retrieval-augmented generation.

Specify. Build. Verify. Then Ship.

01 Specify

Two weeks, fixed scope, fixed price. Landscape and architecture review, domain contracts, interface specs, policy versions. You leave with an architecture you can

02 Build

Clean Core extensions on BTP. Integration flows from a pattern library. AI-assisted generation for repeatable objects, every artefact reviewed by a certified architect.

03 Verify

Automated read-back against SAP after every run. Reconciliation to SAP totals. An evidence pack your auditors and InfoSec can read.

04 Ship and run

Cutover, hypercare, runbooks, handover, with a named engagement lead who stays through run.

act on.

Value Lens (private beta)

Where did we lose money this week that we should not have lost? Value Lens is our margin leak finder for order-to-cash. It reads SAP-like sales, pricing, cost and agreement facts through read-only tools, computes margin in exact integer cents under a versioned policy, and raises evidence-backed cases a finance reviewer can accept or dismiss with a reason. Agents explain. Humans decide. SAP stays the system of record.

Private beta on synthetic SAP-like data. Production SAP connector in development.

SAP Intelligence Suite

Our AI-assisted SAP engineering workbench: integration flows, ABAP and RAP artefacts and SAP functional answers from plain-English requests. Trained on your own reviewed library. Runs with local models on your infrastructure or with a hosted model of your choice; your artefacts and code stay in your landscape. Every output goes through architect review before it reaches a landscape.

In use in SVLS LABS delivery. Available to customers on request; deployed in your landscape, reviewed by your architects.

The Control Model

READ BEFORE WRITE

The agent reads the current SAP state before it proposes anything.

CONFIRM TO ACT

A person reviews and confirms every create and update.

VERIFY AFTER

SAP is read back after every action, and the result goes into the audit trail.

Numbers come from deterministic code, never from the model. Every case carries its sources, its calculation and its decisions.

How to Start

Book a discovery call: a 45-minute call with an architect, not a salesperson. Or start with a two-week, fixed-scope, fixed-price discovery. Replies within one business day.
