Innovative Software for Enterprise and Entertainment.

SVLS LABS builds software that does the groundwork and shows its work. Two portfolios, Enterprise Software and Entertainment & Media, and two flagship products: CuTTI and Value Lens. Founded 2020.

2020
founded. SVLS LABS LLP

2
portfolios: Enterprise Software and Entertainment & Media

2
flagship products: CuTTI and Value Lens

25+
years of ERP delivery experience across our key architects

Two Flagship Products

FLAGSHIP · ENTERTAINMENT & MEDIA

CuTTI

One request, a full producer session in Logic Pro. Describe the track; CuTTI builds a real, editable session with Logic's own instruments, checks every step, then mixes and masters it to −14 LUFS. Every track, region and note stays yours to edit.

> Available to purchase from 1 January 2027. Early access is open: svlslabs.com/products/cutti/

FLAGSHIP · ENTERPRISE SOFTWARE

Value Lens

Where did we lose money this week that we should not have lost? Value Lens finds margin leakage in ERP order-to-cash. Read-only tools, margin in exact integer cents under a versioned policy, and evidence-backed cases a finance reviewer accepts or dismisses with a reason.

> Private beta on synthetic ERP-like data. Production ERP connector in development.

Enterprise Software

01 · ERP

Clean core from the first transport

ERP programmes, integration and extensions from a pattern library, with a written contract per interface and a read-back check after every run.

02 · CLOUD

Cloud around the core

ERP-to-cloud integration, cloud-native services, migrations and landing zones that keep the ledger intact. Every extract reconciled to source totals.

03 · AGENTIC & APPLIED AI

Governed agents

MCP tool catalogs, LangGraph and RAG under a control model where every write is read before, confirmed by a person and verified after. Applied research in Markov and stochastic models, constraint-based generation and optimisation.

Entertainment & Media

ORIGINAL MUSIC

Composed and produced in-house

Songs and scores across pop, cinematic and Indian traditions, produced with the same care we put into software.

PUBLISHED FICTION

Five titles in 2026

Novels and story collections, written in-house: svlslabs.com/media/#books

CREATIVE TOOLS

Software we wished we had

CuTTI first, and CuTTI Score, now in free beta, for turning printed music into playable, editable scores. Tools that do the groundwork so makers can spend their time on the work.

How We Build

01 Specify

We write down what done looks like before we build: contracts, policies and acceptance checks.

02 Build

Deterministic code for every number, AI where it helps, and a person reviewing what reaches you.

03 Verify

Every step is read back and checked. When something cannot be verified, we say so.

04 Hand over

What we deliver is yours to edit, own and extend, with the evidence attached.

The Control Model

READ BEFORE WRITE

Software reads the current state before it proposes anything.

CONFIRM TO ACT

A person reviews and confirms every create and update.

VERIFY AFTER

The result is read back after every action and goes into the audit trail.

How to Start

Join CuTTI early access, request Value Lens beta access, or book a 45-minute discovery call with an architect. Replies within one business day.
